

## Evidence informed teaching and leadership

### Maximising Memory for the Primary Curriculum

Providing primary leaders and teachers with an understanding of the evidence from cognitive science to help avoid potential pitfalls of curriculum change. We will look at how best to design a curriculum, learning sequences and lessons for retention including how to ensure that retrieval practices are varied and accessible.

We have considerable experience supporting leaders to implement change using the EEF's Putting Evidence to Work Guidance Report and evidence about the leadership of change. We are happy to support the growth of your capacity to identify and use evidence and implement it effectively.

Want us to deliver bespoke training around some evidence? We are happy to do so and offer a range of options, not limited to those above. All programmes are the equivalent of 3 days minimum, delivered over time.

Day one - 4th March  
Day two - 1st April  
Day three - 17th June

The course is delivered over three days and will be held at Dixons City Academy. Schools can send an additional delegate.
