BASF Schools activities

BASF takes it's social commitment in the area of education seriously and gets involved in various ways. In terms of content, the focus is on activities supporting the national curriculum.

BASF Kids' Lab
Bradford

BASF
We create chemistry

The BASF Kids' Lab in Bradford

Children aged 8 – 11 can discover the secrets of chemistry by carrying out experiments for themselves in a real laboratory, developed just for them.

They can have great fun investigating science in their everyday lives and learn that chemicals and inventions are not only exciting, but also useful.

BASF offers schools/groups the opportunity to engage in the Keep Cool! experimentation programme, where pupils are asked "How can we keep drinks cold for longer?"

Pupils carry out three experiments

- Protecting from heat - looking at different materials that keep cold things cold
- Cooling with electricity - using a Dynamo and a Peltier element marked with the shape of a star with a thermochromic varnish that changes colour as the temperature changes
- Showing temperature with colour - Using "Insta Worms" to show colour change in cold and warm water

The visit also explores the positive impact science and chemistry has on your everyday life - can you imagine 24 hours without science?

Our volunteer chemists eagerly await your school/group visit, so that they can help you discover and learn more about science.

“We want to stimulate the interest of children and young people in science.”

“We want to give students an insight into industry.”

“A well educated young generation is important for BASF.”

How do I book my school/group in the Kids' Lab?

To register your school/group please contact:

Joanne Love on 01274 417942
or email joanne.love@basf.com
or

Narda Greenwood on 01274 417632
or email narda.greenwood@basf.com

A typical visit will include:

09.00 am - Arrival at the BASF on Cleckheaton Road

09.15 am - Introduction/light refreshments

10.00 am - Site tour

10.30 am - Experiments in the lab

12.00 pm - Depart from site
