

Primary Science: Strengthening Your Subject Knowledge

This course focuses on the big ideas in primary science which will help you make a difference to children's learning by identifying and challenging misconceptions.

Reinforcing your own subject knowledge and learning about the new topics and ideas in the latest curriculum will give you greater understanding in order to develop your curriculum delivery and assessment.

This course is made up of four half days; each of which addresses the key subject knowledge for a national curriculum year. Led by Mick Dunne, the sessions will support you in developing subject knowledge and teaching approaches as well as giving you practical ideas to implement in your classroom.

Notes

8th November 9.00am to 12 noon	Year 3
8th November 1.00pm to 4.00pm	Year 4
