

BE SAFE BE SEEN

BE SAFE BE SEEN

Make sure you can be seen during the day by being as bright as you can. Fluorescent colours are the brightest of all and really help to get you noticed during the day. The ultra violet rays in sunlight react with fluorescent colours and make them glow.

Reflective materials are best when it is dark and at dusk. Reflective materials reflect light from car headlights and streetlights, this makes you light up so that you are seen easily.

These stickers are examples of the colours you should be looking for to help you be seen.
