#techgoals is the exciting new campaign from Leeds City Region Enterprise Partnership to enhance the teaching of digital skills

#techgoals is an ambitious five-year programme to improve digital skills in schools across the Leeds City Region. The programme - the first of its kind in the UK - offers development for teachers and provides a wide range of curricular and extracurricular resources to help equip young people for the range of exciting digital career opportunities that exist across the City Region.

Three ways your school can benefit

Free teaching resources to bring tech to life in your classroom

Available to both primary and secondary teachers, all #techgoals curriculum resources are FREE, easy to use, designed by employers and based on real-life scenarios. Best of all for busy teachers, they're fully packaged – providing you with lesson plans, videos, downloads, software and data sets.

Modules include:

- **Countdown to Chaos!** Learn about cyber security and catch the hacker before the lights go out.
- **The race for data!** A disease has broken out among Year 8. Use the data to find a cure before the whole school becomes ill? Designed by SAS UK.
- **IBM Wimbledon** Design and build an app for a new player at Wimbledon. Can you get the player to the final on time?

Free CPD for secondary school teachers

A series of free after-school CPD events is running across the City Region to introduce secondary teachers to the #techgoals platform and hear from an employer about local needs for digital skills. Events take place at 4–6pm through to the end of March.

Teachers who attend can then take a CPD day away from the classroom before summer term ends – costs of one-day's supply cover are provided.

Get competitive!

Help students showcase their digital skills in the #techgoals competition. Using the resources on the #techgoals platform, teams of students can build an app to benefit their local community, and compete for prizes. The competition is suitable for all age groups – with categories for primary and secondary students. Winners will be announced at the Leeds Digital Festival in April.

> "Many thanks for creating such wonderful projects. I'm currently in the process of ripping up the scheme of work for Year 9 and introducing these projects for the remainder of the teaching year. I'm sure my students will benefit a great deal."
>
> *IT teacher, secondary school*
>
> "The wearable tech module is extremely exciting. I'll run it twice next academic year – and Countdown to Chaos too. I'm going to structure my offer around your projects next year."
>
> *Head of computing, academy school*
